DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26, 44-71, and 74-82 drawn to subject matter including a compander, classified in class 381, subclass 106.
 - II. Claims 27-33 drawn to subject matter including a equalizer, classified in class 381, subclass 103.
 - III. Claims 34-43, and 72-73 drawn to subject matter including a signal processor and a signal processing method in which including frequency control, classified in class 381, subclass 98.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)).

In the instant case, the combination as claimed in Group I does not require the particulars of the subcombination as claimed in Group II because the compander can reduce dynamic range of a signal without using equalizer (i.e., without correcting any

distortion). The subcombination has separate utility such as the equalizer can be used to equalize a signal itself (i.e., without a compander to reduce dynamic range of the signal).

Group II does not require the particulars of the subcombination as claimed in Group III because the equalizer can equalize a signal without using signal processor or signal processing for a filter or a power estimator (i.e., equalizing all input signals). The subcombination has separate utility such as filter or a power estimator for processing video signal, for example.

Group I does not require the particulars of the subcombination as claimed in Group III because the compander can reduce dynamic range of a signal without using signal processor or signal processing for a filter or a power estimator (i.e., companding all input signals). The subcombination has separate utility such as filter or a power estimator for processing video signal, for example.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
